Chapter - 15 — Devtinder UI Part I

→ we will use "Vite" as bundler for our React + Javascript webapp.

→ Might face error of Node.js version is not up to date.

→ It can be corrected using nvm
go to terminal
nvm install latest
nvm use latest
↓
Now shifted to latest Node.js version

→ for designing purposes
- we will use tailwindcss
(Vite installation, it has been (or way of using it) has been changed drastically.)

- also use daisyUI (for components) as plugin for tailwindcss.
↓
easy to design navbar, accordion, card and buttons there are many more components.

→ Don't write everything in a single file.
(make smaller and smaller components).
(for everything ⇒ make components)

→ Adding routing to react
"use react router package".

→ focus a lot upon routing (one of the major things in frontend part)
↓
it directly impacts SEO
↓
can't be changed randomly

→ How the component should be rendered?

Body
Navbar
Route = / ⇒ Feed
Route = /login ⇒ Login
Route = /connections ⇒ connection
Route = /Profile ⇒ Profile
